Linux Operations Engineer

U.S. Citizenship Required

The Linux Operations Engineer is responsible for monitoring the health & welfare of the linux-based production network and take corrective measures when necessary. This entails performing change requests and routine maintenance, provisioning new services, and assisting senior engineers with special projects, as needed.

This is a full time position, located in Northern VA, with core hours of 8a-5p, though there is some flexibility on start and end times (ie this is not shift work). A successful candidate will have a history of working independently, taking ownership of issues, assigned tasks, continuing to increase their technical competency, and quickly becoming familiar with products, current deployments, and network & system architectures.
